

With EleVastin™, Gattefossé fights gravity-induced skin sagging

Press Release

April 1st, 2021

Gravity enables us to stand on the planet Earth, we can't escape from it. Though the laws of gravity are inescapable, the side effects they have on our skin don't have to be.

EleVastin™ is the targeted solution to gravity-induced skin sagging. The ingredient strengthens the elasticity of the skin, giving it the support needed to cope with this downward pressure.

Renewed elastic potential

The efficacy of EleVastin™ has been demonstrated using various models of increasing complexity. The ingredient boosts key proteins involved in the synthesis and maintenance of functional elastic fibers: elastin, fibrillin-1 and fibulin-5.

It also protects elastic fibers against their degradation by elastases.

Through this mechanism of action, it ensures an increase of the density of elastic fibers coupled with an augmented skin elasticity. These last outcomes have been obtained using an advanced spheroid model developed in our cell culture laboratory.

To learn more, [watch the interview](#) of Dr HDR Nicolas Bechetoille, Skin Biology Research Manager.

Fighting gravity-induced aging signs

Tested at 1% only, on 37 volunteers, the ingredient proved its capacity to reduce drooping of the lower face.

Skin elasticity is significantly improved vs. placebo. Facial contours are better defined, and deep vertical wrinkles are significantly reduced.

Before

Vol.23

After

A novel and original measure of the effects of gravity on facial morphology was adopted, confirming the ability of EleVastin™ to limit the impact of gravity on aging signs of the face.

More explanation are given [in the video](#) by Viviane Bardin, Substantiation Manager

100% natural origin content

Traditional plants used for therapeutic or culinary purposes are an unlimited source of inspiration for Gattefossé scientists. One of these plants, *Murraya koenigii*, has been used for hundreds of years in ayurvedic medicine and in cuisine.

In association with our local, long-time partner, leafy stems of the *Murraya koenigii* tree are manually harvested from fertilizer-free plots in the preserved environment of La Reunion island. Perfect traceability is ensured from the tree to Gattefossé laboratories.

A rich pool of synergistic phytomolecules is obtained using an innovative blend of solvents from plant origin and gentle extraction process. This results in a 100% natural origin content according to the norm ISO 16128 and a COSMOS approved ingredient.

*"The phytochemical content of *Murraya koenigii* is both very rich and well described, which has made it possible to adopt a methodical research strategy for plant extraction. By adjusting the polarity of the solvents, we have been able to target more specifically certain molecular families such as flavonoids, phenolic acids or alkaloids.*

In parallel, in our laboratories, and also in partnership with experts in proteomics and biomechanics, we have developed innovative in vitro evaluation models. They enabled us to achieve a very comprehensive demonstration of the biological efficacy" says Boris VOGELGESANG, R&D Director Cosmetic Actives.

"EleVastin™ is the achievement of the latest advances of Gattefossé in plant extraction and scientific substantiation of claims. In our cell culture laboratory, our scientists develop in vitro models ever closer to real skin conditions. The clear reproducibility of the results obtained with EleVastin™ on different types of skin models is a true assurance of the ingredient's efficacy.

Besides, its high naturality profile is the outcome of years of research, finetuning solvents compositions and searching the perfect fit with plant material. We are very proud to provide the cosmetic market with this robust and truly natural active ingredient" explains Laurie CANEL Product Marketing Leader - Personal Care Actives.

About Gattefossé

Gattefossé is a French company who develops, manufactures and sells specialty ingredients for the personal care and pharmaceutical industries. Specialist in lipid chemistry and plant extraction, the group offers recognized expertise in formulation using its 4 application laboratories.

Gattefossé markets its products in more than 60 countries through 12 affiliated companies and a network of agents and distributors which provide solid technical support to its customers: 75% of its turnover is achieved outside France.

The company remains a family-run, independent business since its creation in 1880 and now employs 320 people worldwide.
