

Apifil® CG

Melting sensation

People make our name

Active texture

First wax derivative created by Gattefossé, Apifil® CG is an emblematic product in our range of sensorial emulsifiers.

Based on beeswax, Apifil® CG emulsifies up to 50% oil phase and provides textures with a comfortable melting feel.

Derived from beeswax

Naturally moisturizing

High melting sensation and comfort

[O/W emulsifier
HLB 9]

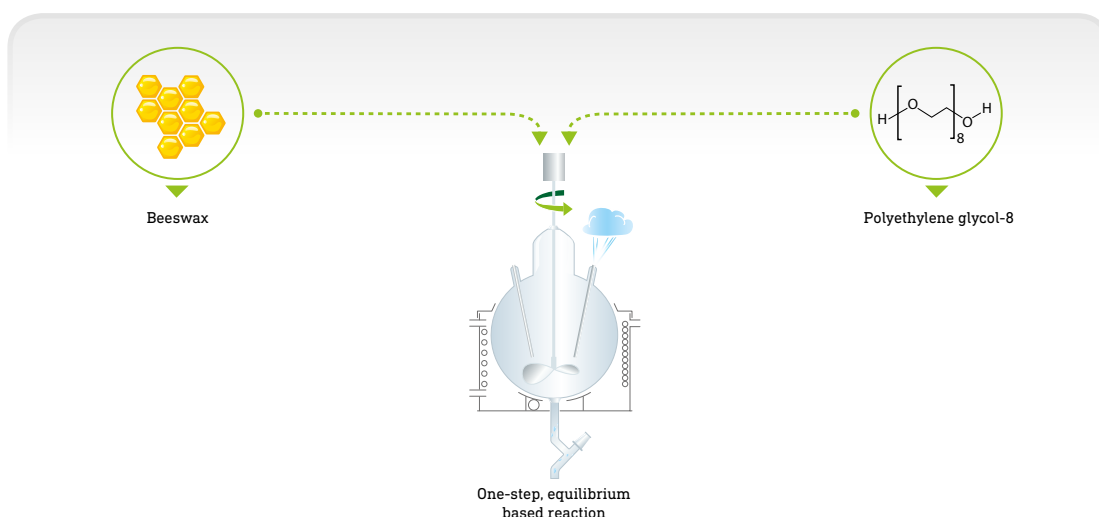

Taking the best of beeswax

Beeswax has numerous advantages that are of interest for cosmetic formulations...

- 1 it helps increase emulsion **viscosity** and improves **spreadability**
- 2 it enriches the oil phase of emulsions and improves **afterfeel**
- 3 it contributes to **skin hydration** by reducing moisture loss through the creation of a protective lipid film
- 4 it contains **natural antioxidants** which protect the oil phase of cosmetic formulations

... but beeswax has very limited emulsifying properties when unmodified.

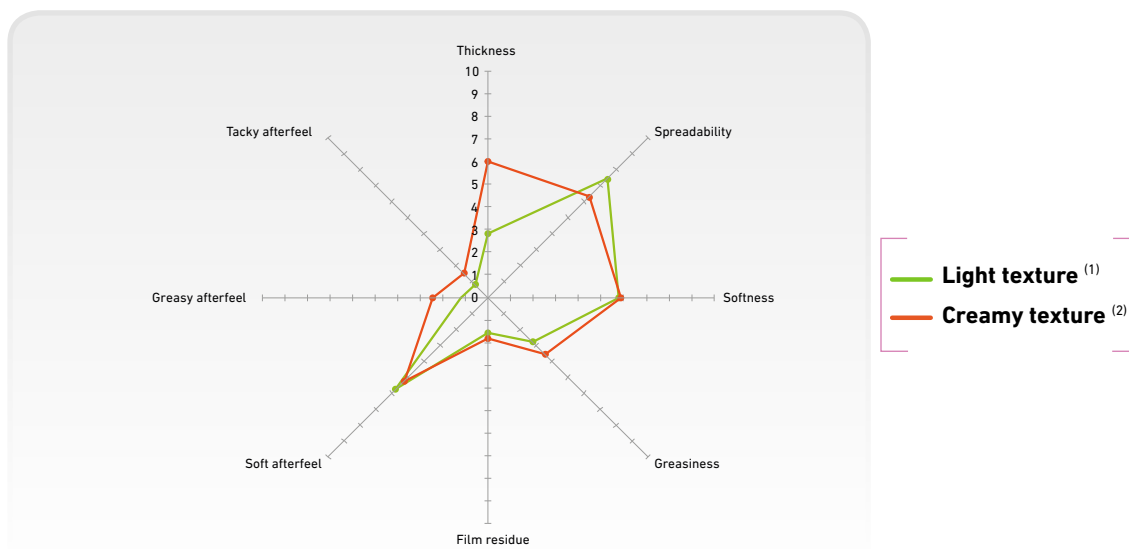

Using their strong expertise in transforming and functionalizing natural waxes, Gattefossé oleochemists have developed Apifil® CG, an O/W emulsifier that features all the benefits of beeswax.

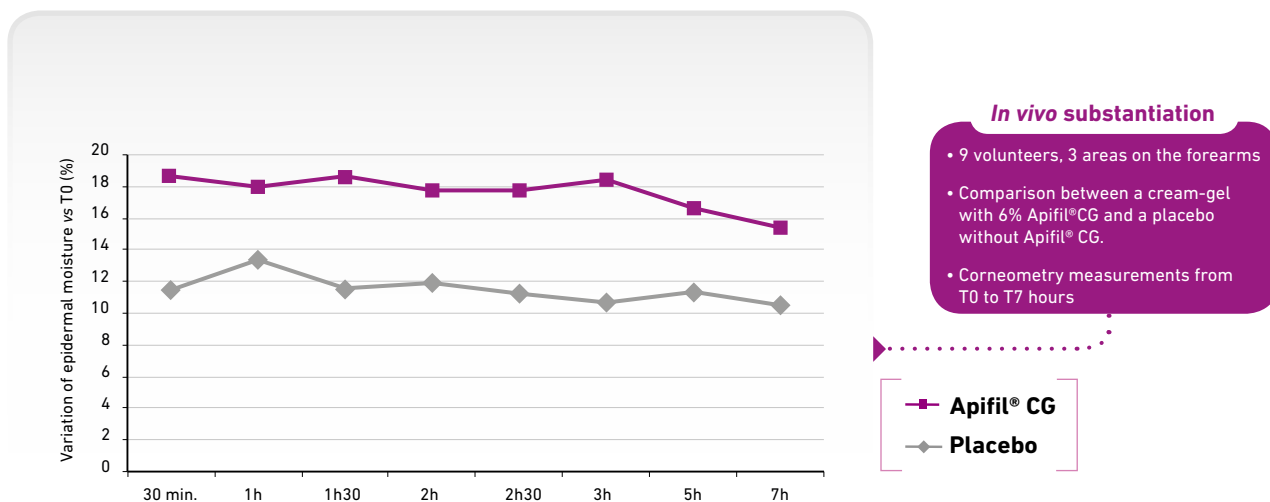

Melting sensation and moisturizing properties

Sensorial delight

Apifil® CG allows the creation of white, bright and rich emulsions, with a light afterfeel. Its high melting sensation and high comfort during application are easily recognizable.

Moisturizing power

Apifil® CG significantly increases hydration, for at least 7 hours after application, and at all measurement times. After a unique application, Apifil® CG increases the moisturization level by 18% (versus the same area before application).

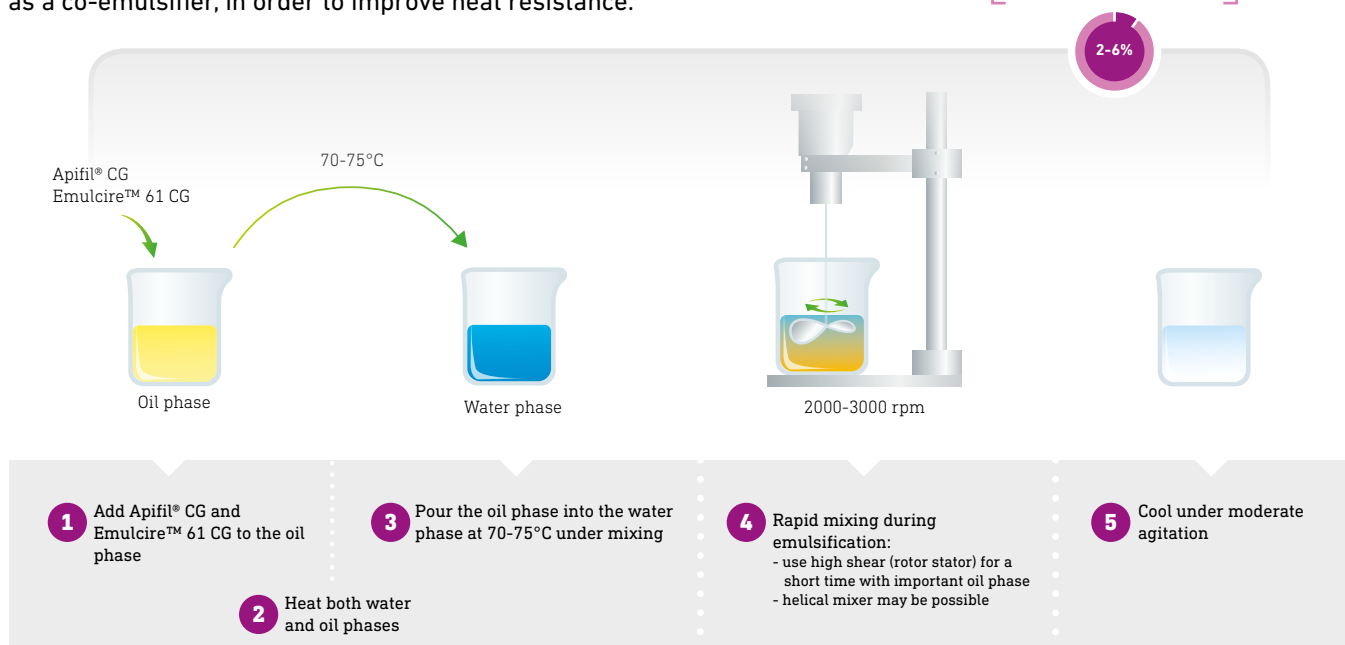

⁽¹⁾ SC 2120/B (Apifil® CG 2% / Emulcire™ 61 CG 1%)
⁽²⁾ SF 1277/D (Apifil® CG 3% / Emulcire™ 61 CG 2%)

Easy to formulate

Direct emulsification / Hot process

It is recommended to use Apifil® CG in association with Emulcire™ 61 CG ⁽³⁾ as a co-emulsifier, in order to improve heat resistance.

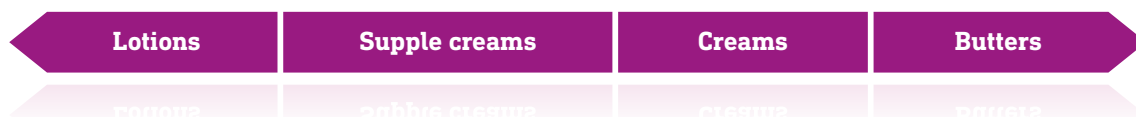

[Use level]

Compatibility

Gelling agents (necessary)	Compatible with most gelling agents: Acrylic polymers (allow light skin feel) Xanthan Gum (improve pick-up)
Consistency agents	Recommended associations: Cetyl Alcohol or Cetearyl Alcohol (increased stability at 50°C)
Oils	All types of oils up to 50%
Actives	Compatible with most actives at a pH between 4.5 and 7
UV filters	Mineral and organic
Alcohol	Up to 10%

Wide range of textures

⁽³⁾ Cetyl Alcohol (and) Ceteth-20 (and) Steareth-20

Apifil® CG

is an O/W sensory emulsifier that provides unique active textures with a comfortable melting feel.

Beeswax is the most produced natural wax. It is used by bees, *Apis mellifera* species, to create honeycomb where honey is stored.

Beeswax composition is unique and complex, and confers exceptional properties to emulsions. It is well known for its oil binding capacity. Easily formulable, it brings softness.

Characteristics

- O/W emulsifier (waxy pellets)
- HLB 9

Applications

- Skin care: facial creams, massage creams, hand creams, body lotions
- Hair care: masks, glosses
- Sun care: protective sunscreen creams, after sun preparations
- Make up: mascaras, foundations, lipsticks, pencils

Sensoriality

- All kind of textures, from lotion to butter
- High melting sensation and comfort during application
- Non greasy, non tacky after feel

Use level

2-6%

Use pH

4.5-7

INCI: PEG-8 Beeswax

Worldwide approval for cosmetic applications

Listed on IECIC (Inventory of Existing Cosmetic Ingredients in China) 2015
