

Gatuline® In-Tense MB

In-depth remodeling

People make our name

Boosting the skin biomechanical functions

Maintaining a youthful appearance is one of the main aging concerns. As the skin ages, a progressive disorganization of the dermal structure occurs and is responsible for reduced firmness and tonicity. Face and body contours lose their definition, décolleté and neck areas become wrinkled.

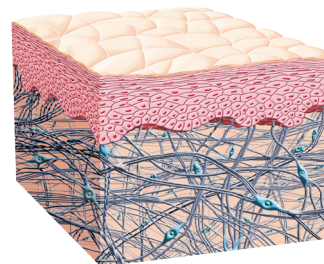

Gatuline® In-Tense MB is an active ingredient of natural origin that acts deeply in the skin. By stimulating fibroblasts' activity, it provides support to the collagen fiber network and restores firmness and smoothness of the face and the body.

A natural origin anti-aging active that strengthens the skin from within

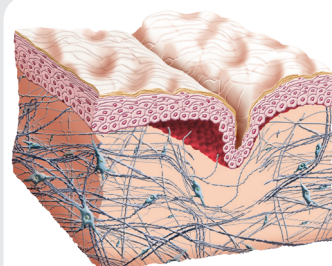

The dermis is a **connective tissue** composed of fibroblasts that produce proteins (mainly collagen and elastin), found in the extra-cellular matrix (ECM). Fibroblasts play a key role in the dermis architecture as they permanently interact with the ECM in a three dimensional structure. Thanks to their **mobility** and **contractile properties**, **fibroblasts organize a supporting network** that brings firmness and elasticity to the skin.

Due to skin aging, the dermis undergoes several changes: cellular dynamism weakens, fibroblasts functionality is altered, collagen production reduces. Finally, the skin supportive tissue become loose, causing the skin to slacken and wrinkles to deepen.

To **bring back firmness and smoothness**, it is essential to reinforce the dermis structure, by **stimulating fibroblast biomechanical functions**.

20 year old skin

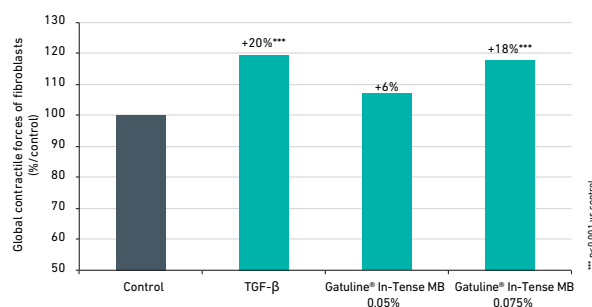

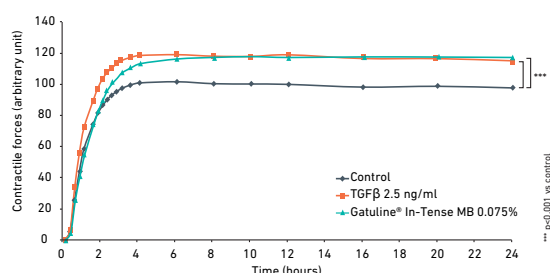

60 year old skin

Stimulation of the contractile power of fibroblasts

The tightening and firming properties of Gatuline® In-Tense MB have been measured *in vitro* using a GlasBox^{Plus}® device ⁽¹⁾.

This device quantifies the forces developed by fibroblasts and allows to determine their lifting effect.

These results highlight a clear **stimulation of the contractile power** of the fibroblasts in presence of Gatuline® In-Tense MB, comparable to TGF-β (positive control).

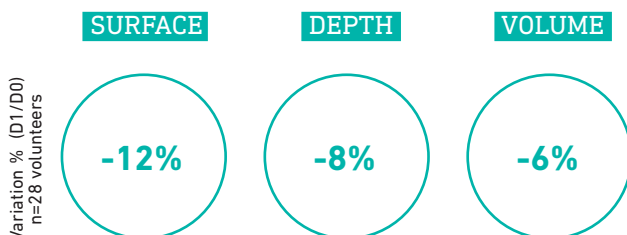

⁽¹⁾ GlasBox^{Plus}® device: cell chamber composed of eight rectangular culture wells in which dermal equivalents are attached to specific beams. The contractile activity of fibroblasts induces a deformation of the beams that can be measured over time / No pre-treatment of fibroblasts / vs. positive reference (TGF-β)

Restored smoothness on the face and neck

The efficacy of Gatuline® In-Tense MB has been clinically assessed on multiple parts of the face and body.

Immediate reduction of crow's feet wrinkles ⁽²⁾

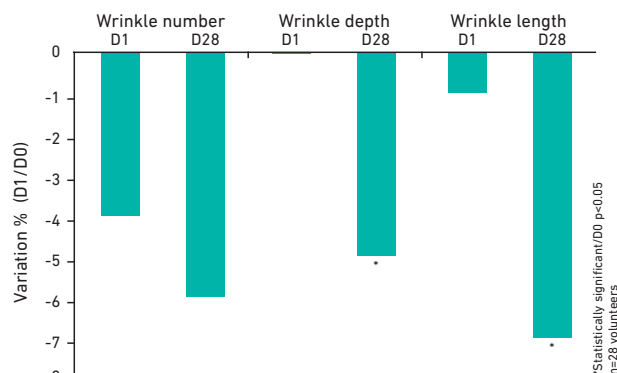

Laser Profilometry

Vol. #56

Clinical scoring

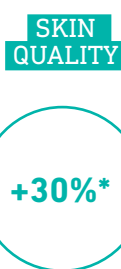

Gatuline® In-Tense MB visibly **smoothes the skin microrelief** and reduces crow's feet wrinkles from the very first day of use.

Younger skin appearance of the neck ⁽³⁾

Clinical scoring (n=22)

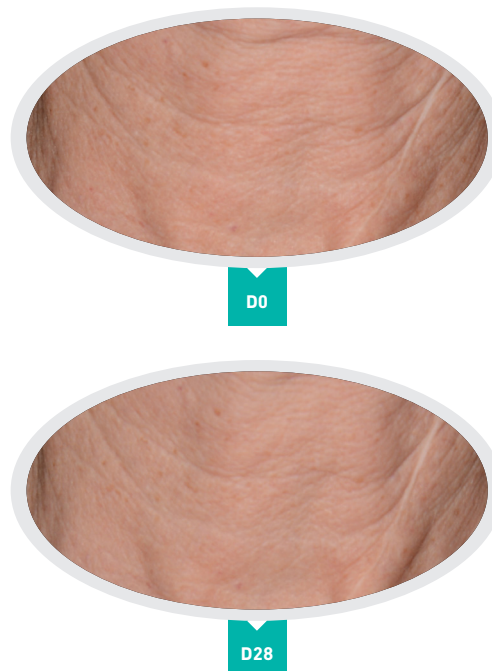

Self-assessment (n=30)

*Statistically significant/D0 p<0.05

After only one month of use, the skin appearance and quality on the neck is significantly improved.

Vol. #5

Gatuline® In-Tense MB visibly reduces the wrinkled appearance of the skin and improves its smoothness.

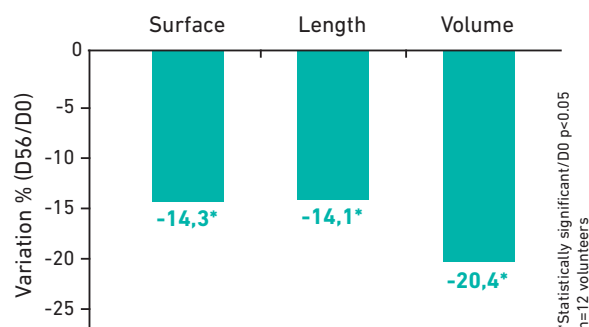

⁽²⁾ 28-days clinical test on one panel of 28 volunteers, with mature skin, involving twice-daily application on the face of a cream containing 2% Gatuline® In-Tense MB.

⁽³⁾ 56-days clinical test on 30 Caucasian women, with mature skin, involving twice-daily application on neck, décolleté, arms and forearms of a cream containing 1% Gatuline® In-Tense MB.

A boost of youth and firmness for the body

Restored beauty for the décolleté ⁽³⁾

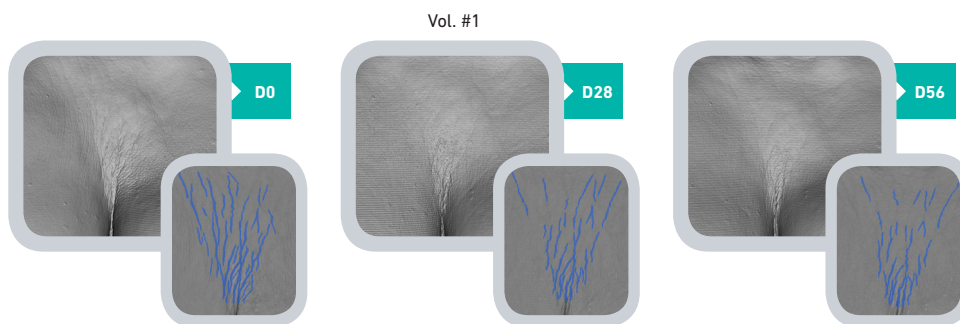

Analysis of the décolleté wrinkles from 3D acquisitions

Clinical scoring

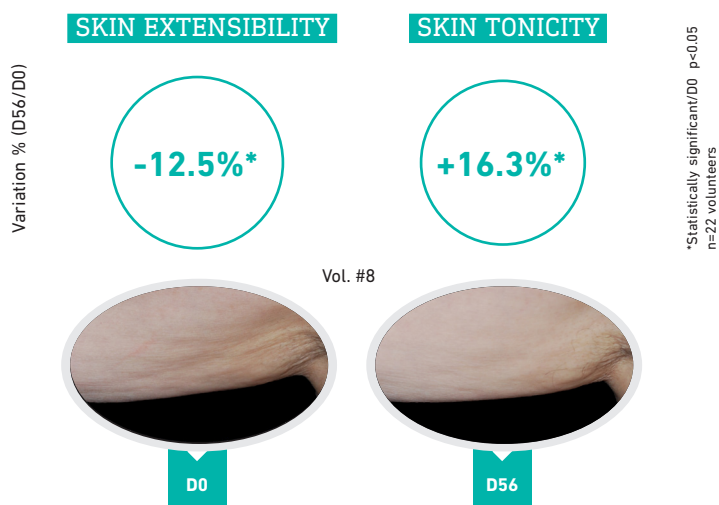

Gatuline® In-Tense MB reduces the crepey appearance of the décolleté, making it smoother and softer.

Visible body firming ⁽³⁾

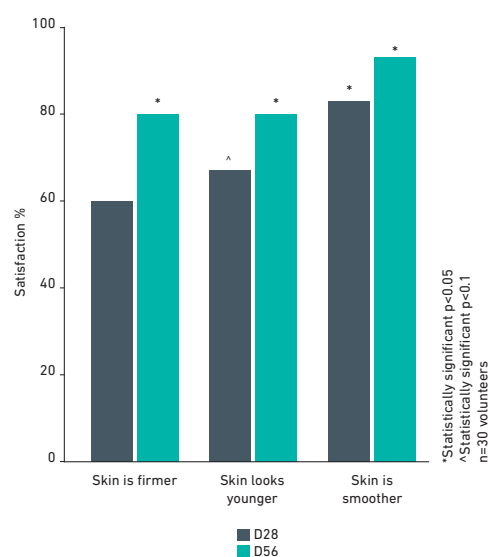

Cutometer ⁽⁴⁾

While redensifying the skin supportive tissues, Gatuline® In-Tense MB reduces skin extensibility, providing **more firmness and tonicity** to the body.

Perceived efficacy ⁽³⁾

Self assessment questionnaire

Acting on the dermis architecture, Gatuline® In-Tense MB restores the firmness of the body and the beauty of the décolleté.

⁽³⁾ 56-days clinical test on 30 Caucasian women, with mature skin, involving twice-daily application on neck, décolleté, arms and forearms of a cream containing 1% Gatuline®In-Tense MB.

⁽⁴⁾ Evaluation performed on the forearm

Gatuline® In-Tense MB

Acts deeply in the skin, in the extra-cellular matrix. The cellular dynamism and fibroblasts contractile power are boosted, ensuring the recovery of proper cutaneous density.

As a result, the skin is firmer, more tonic. It appears smoother and younger. Signs of aging on the face or body are significantly reduced and skin beauty is restored.

Gatuline® In-Tense MB is a concentrated oily extract from the flower of the *acmella* plant also called Paracress or "Brède mafane", a traditional spicy condiment.

Acmella is renowned for its high content in alkylamides, proved to be excellent markers of the anti-aging efficacy.

Special attention is given to a selective and sustainable harvest of the flowers (upper buds only) to ensure the reproduction of the specie.

Claims

- Reinforces the architecture of the dermis
- Stimulates the biomechanical functions of the fibroblasts
- Reduces wrinkled appearance of the face and neck
- Smoothes the décolleté area
- Makes body skin firmer, more tonic

Applications

- Facial care: day and night lines, anti-aging, anti-wrinkles, facial contour remodeling
- Body care: firming, body sculpting
- Make up: firming foundations, replumping lipsticks

Use level

1-2%

INCI name: Caprylic / Capric Triglyceride (and) *Acmella Oleracea* extract

Worldwide approval for cosmetic applications

Listed on IECIC (Inventory of Existing Cosmetic Ingredients in China) 2015
