

Gatuline® Radiance

Illuminate & Refine

People make our name

A radiant complexion for a young and healthy skin

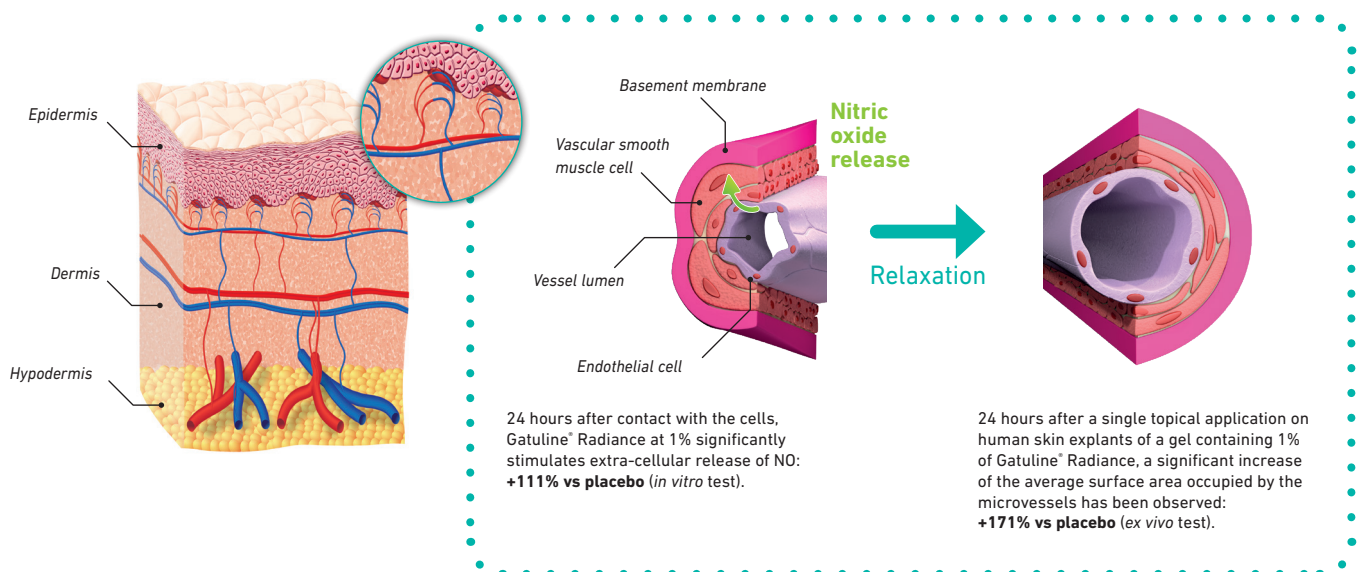

The radiance of the complexion is one of the most critical components of a young, healthy skin. In fact, complexion plays a key role in perceptions of youth and beauty around the globe.

A healthy subcutaneous vascular network is essential to provide oxygenation and nutrition for good complexion. External aggressions cause oxidative stress and premature aging of blood vessels. The result is poor microcirculation and dull skin.

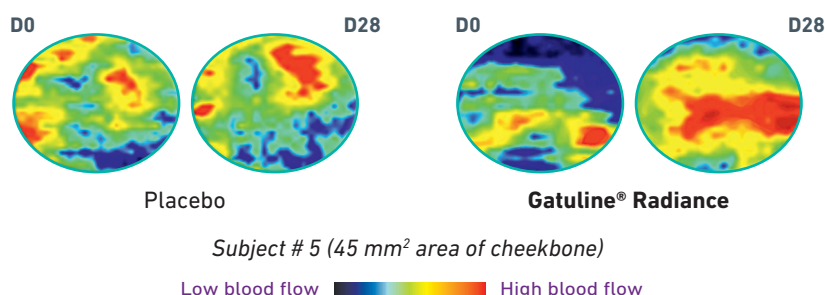

The fruit of *Evodia rutaecarpa* (Wu-Zhu-Yu) has been used for thousands of years in Traditional Chinese Medicine. Using its strong expertise in vegetal extraction, Gattefossé has revealed a totally new activity on microcirculation to restore skin radiance and youthfulness.

Mechanism of action

The efficacy of Gatuline® Radiance on **skin microcirculation** is the direct result of the **extracellular release of nitric oxide (NO) from endothelial cells**. By stimulating this physiological pathway, Gatuline® Radiance enables the relaxation of the microvessel walls, a phenomenon called vasodilation.

Laser Doppler Imaging was used to confirm improvement of skin microcirculation *in vivo*⁽¹⁾. This technique makes it possible to visualize blood flow on the cheekbones of volunteers.

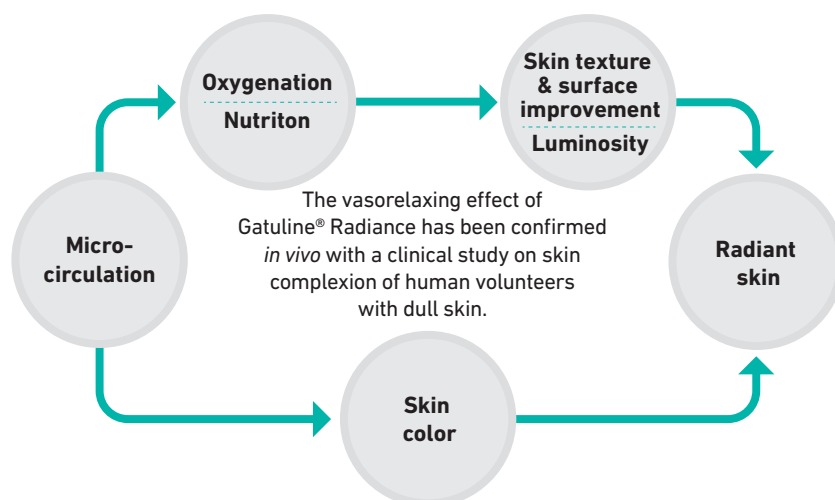

This 2D mapping illustrates the clear activity of Gatuline® Radiance on microcirculation

(1) 28-day clinical evaluation involving twice daily application on the split face of two creams in a double blind study – One cream contained 3% Gatuline® Radiance, the other was a placebo cream – All results are expressed on n=20 Caucasian volunteers with dull complexion.

From microcirculation to skin radiance

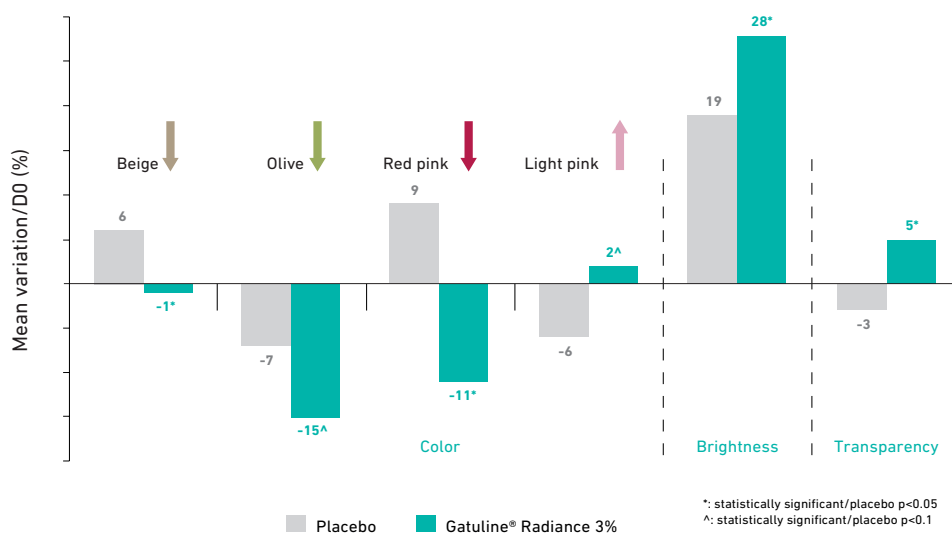

Due to its stimulating effect on microcirculation, Gatuline® Radiance contributes to the nutrition of the support tissues of the skin.

The face is revitalized and acquires a **healthy glow, luminosity and a more even appearance.**

Improves skin color and skin texture fineness

A sensorial method, performed by an expert, quantifies various parameters linked to complexion radiance: skin color, brightness and transparency.

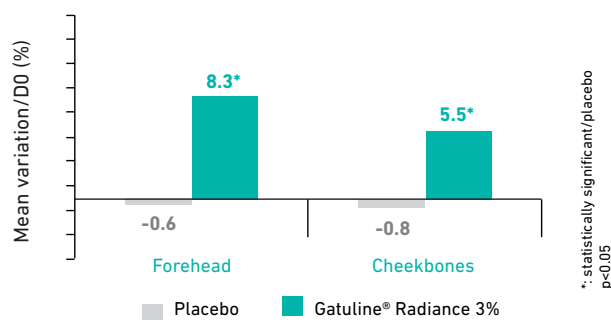

Caucasian skin color is a combination of four shades. It is defined as more radiant when beige, olive and red pink are perceived to be lessened while light pink is more visible.

Enhanced brightness testifies to better color uniformity and regularity in skin texture, while transparency directly reflects the fineness of the skin.

Gatuline® Radiance brings about a significant improvement in color, brightness and transparency of the skin compared to placebo.

Illuminates the skin

Instrumental measurements of light reflection, performed with a glossymeter, assess the effect on skin luminosity.

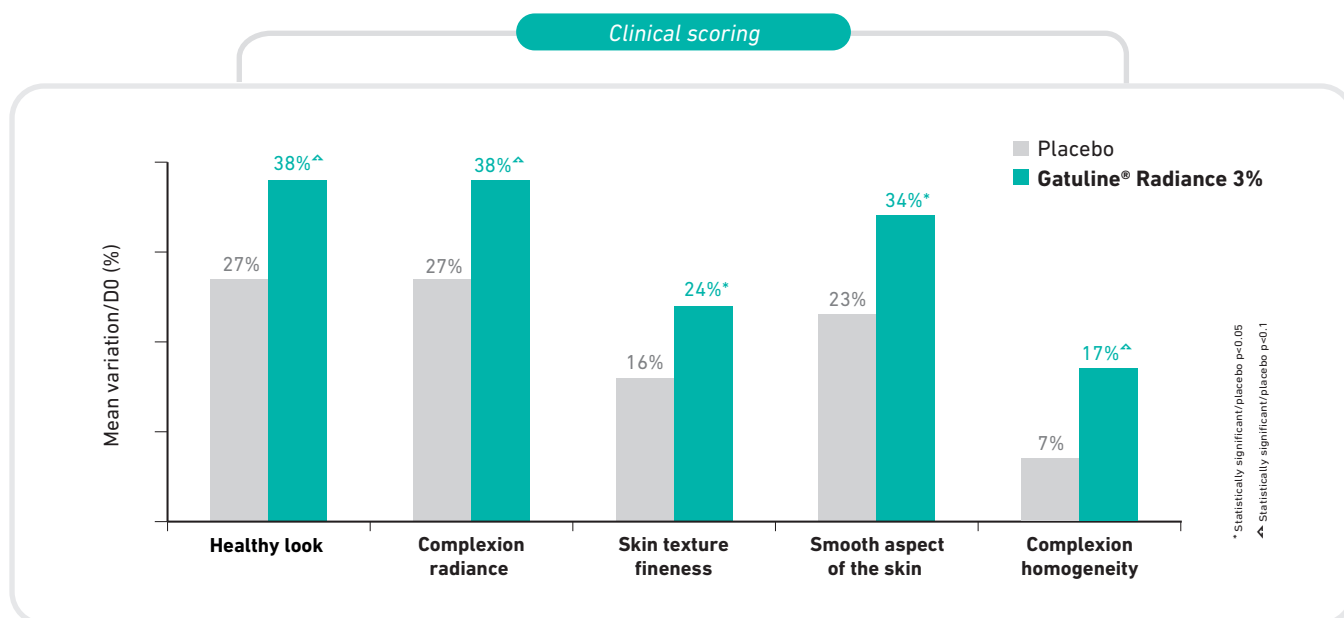

Light reflection is strongly correlated to skin surface smoothness.

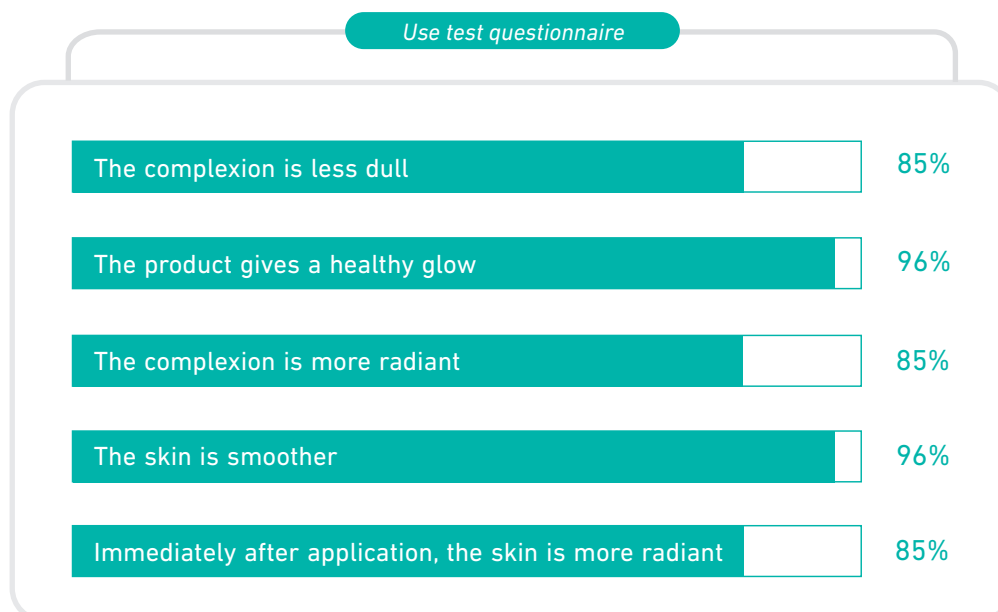

Gatuline® Radiance enables the skin to better reflect light by improving its surface smoothness.

Radiance for all skin types

Enhances healthy glow and skin texture appearance of Caucasian skin ⁽¹⁾

Improves radiance and texture quality of Asian skin ⁽²⁾

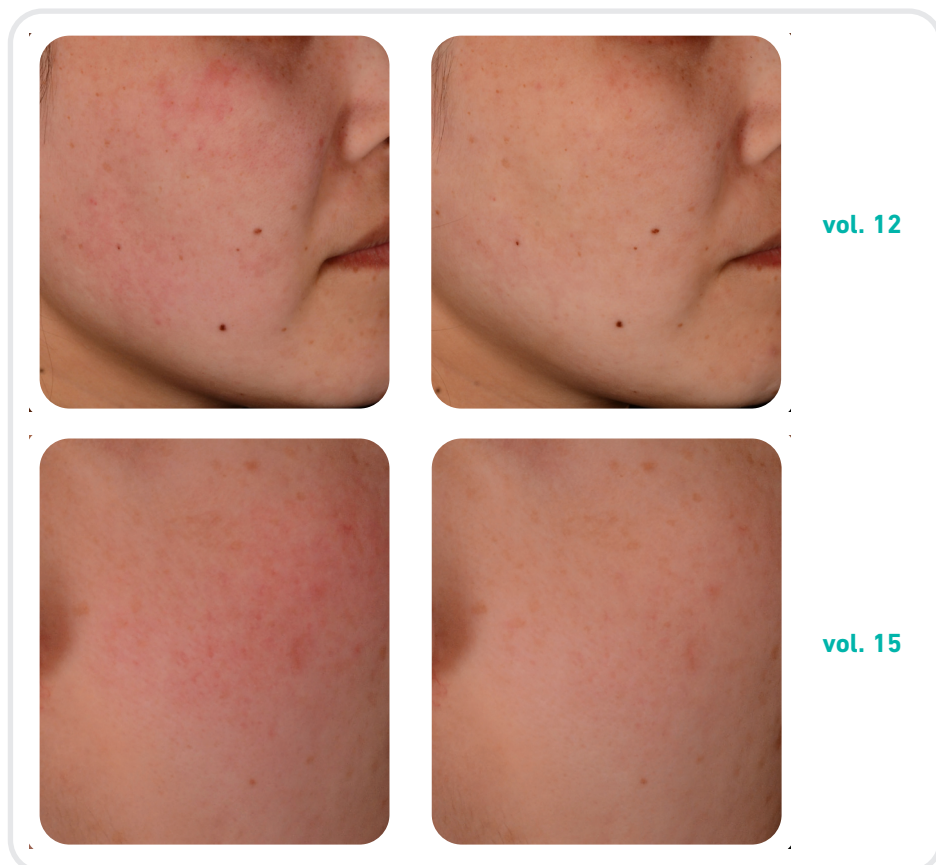

Gatuline® Radiance significantly and visibly improves the skin radiance & luminosity, giving a healthy look to both Caucasian and Asian skin.

⁽²⁾ 28-day clinical evaluation involving twice daily application to the whole face of a cream containing 3% Gatuline® Radiance – All results are expressed on n=26 Asian volunteers with dull complexion.

Radiance even in heavy polluted environment

Pollution is today one of the main sources of skin damage. It was shown to alter skin complexion: pores are dilated, skin sensitivity is increased, skin appears dull and unhealthy. The effect of Gatuline® Radiance was assessed on Asian women living in a highly polluted environment⁽³⁾.

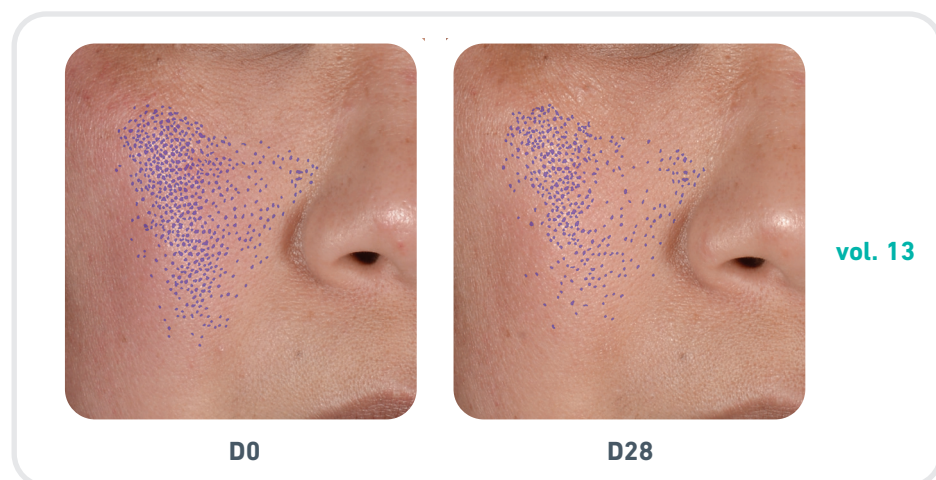

Visibly reduces skin redness

CLINICAL SCORING

Visibility of the redness: -17% ⁽⁴⁾

Minimizes pore appearance

CLINICAL SCORING

Dilatation of the pores: -25% ⁽⁴⁾

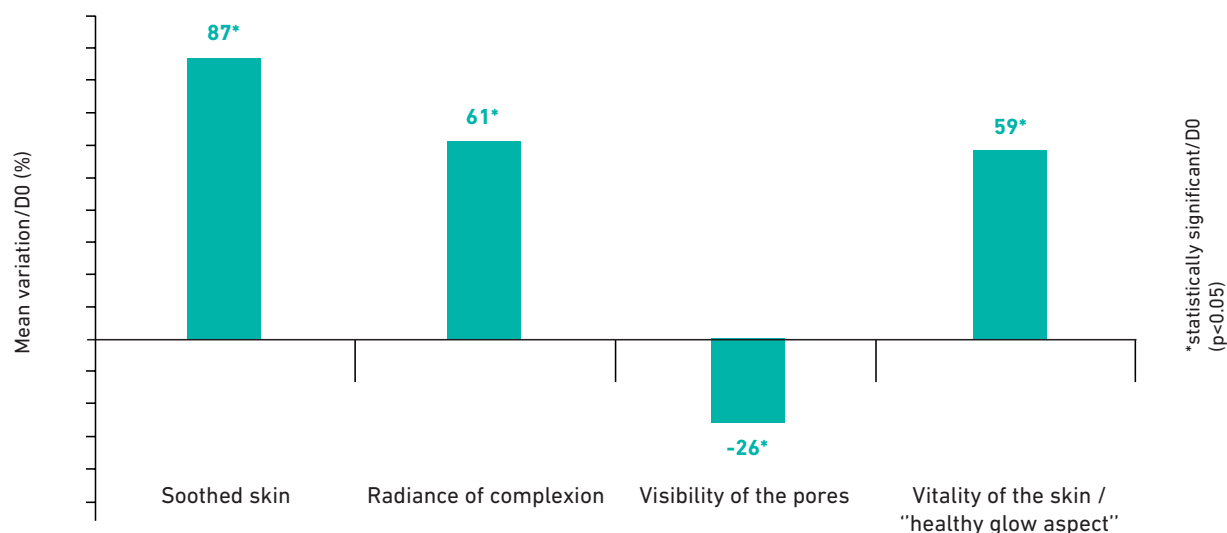

Good microcirculation is crucial to help the skin fight pollution and improve the condition of sensitive skin. Gatuline® Radiance induces a better oxygenation and nutrition, and thus a visible radiant skin.

⁽³⁾ 28-day clinical evaluation involving twice daily application to the whole face of a cream containing 3% Gatuline® Radiance. 27 Asian volunteers with sensitive or hypersensitive skin condition. The study took place in Wuhan, China in a highly polluted environment (Air Quality Index) in February/March 2017.

⁽⁴⁾ Statistically significant / D0 (p<0.05)

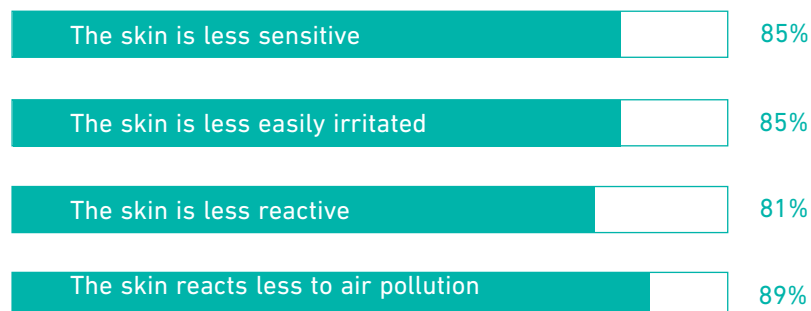

Visible efficacy confirmed by the panelists

Self-assessment

The skin is soothed and more radiant. The vitality of the skin is improved, with less visible pores.

Questionnaire of skin sensitivity adapted from Jourdain & al.

Panelists feel that their skin reacts less to external aggressions.

Gatuline® Radiance

brings youth and radiance to dull skin. Targeting skin microcirculation, it helps maintain flawless skin tone, bringing uniform complexion and visibly enhanced skin brightness even under heavy pollution.

Evodia rutaecarpa is widely cultivated in South East China for Traditional Chinese Medicine.

The extraction process has been specifically targeted to concentrate evodiamine and rutaecarpine, vasoactive molecules identified as tracers of activity.

The maturation steps were also studied carefully to guarantee optimal concentration and stability of active molecules.

Claims

- Boosts skin microcirculation
- Fights dullness
- Enhances skin radiance & luminosity
- Improves skin color
- Refines skin texture
- Anti-pollution

Applications

- Alphabet creams
- Skin perfectors
- Illuminating products
- Global anti-aging lines
- Lip products (reveals natural rosy color of lips)

Use level

1-3%

INCI: Propanediol (and) Evodia Rutaecarpa Fruit Extract

Worldwide approval for cosmetic applications

Listed on IECIC (Inventory of Existing Cosmetic Ingredients in China) 2015
