

Lipocire™ A SG

Sustainable texturizing

People make our name

Natural melting sensation

The fruit of the palm tree, with dark red skin and yellow-orange flesh, is particularly rich in nutrients.

Both the pulp of the fruit and the almond contained within the kernel contain over 50% of triglycerides.

The two oils differ in the length and the distribution of carbons on the triglyceride backbone.

Lipocire™ A SG ⁽¹⁾ is obtained by interesterification of these two hydrogenated palm oils, creating an ingredient with **unique sensoriality** and functional properties.

Solid at room temperature, Lipocire™ A SG melts at a temperature close to that of the skin. Its narrow fusion transition means that a **melting sensation** is strongly perceived upon application to the skin or lips.

Rich in saturated fatty acids of chain length between C10 and C18, the thermal stability of Lipocire™ A SG is excellent, with no risk of rancidity even at high temperatures.

Specific characteristics:

- + Vegetable butter
- + Unique composition
- + Exquisite sensoriality
- + Certified sustainable

LIPOCIRE™ A SG, composed of 100% RSPO Segregated sustainable palm and palm kernel oils, will bring creaminess and a melting touch to cosmetic formulations.

Properties:

- + Very good affinity with the skin hydro-lipidic film
due to the presence of triglycerides
- + Perfect heat stability
- + Gives body to emulsions
- + Improves spreadability and comfort

⁽¹⁾ SG: Segregated

Powerful sensory modifier

Formulations containing Lipocire™ A SG are recognizable for their **ease of application and comfortable afterfeel**. Tested in lipstick by a panel of sensory experts and compared to cocoa butter, Lipocire™ A SG brings:

- + Easier and smoother application
- + Better homogeneity of color and transfer
- + More glossy film
- + Higher coverage
- + Long lasting comfort

Tested by a panel of sensory experts, in a skincare emulsion, Lipocire™ A SG brings (Fig. 1):

- + A melting sensation upon application
- + Body and creaminess

To demonstrate the strong melting effect brought by Lipocire™ A SG and thus confirm the analysis of the sensory experts, rheology measurements have been performed.

The protocol uses conditions that simulate application on the skin:

- Flow at a fixed shear rate of 500 s⁻¹
(average speed of application on the skin)
- Increase in temperature from 25 to 35°C
(heating of the product on the skin)

Lipocire™ A SG induces a thermal and viscosity change of the formulation between 25 and 31°C, perceived as a **melting sensation** at the temperature of application. In comparison, Cocoa and Shea butters have considerably less influence on sensory properties and melting feel (Fig. 2).

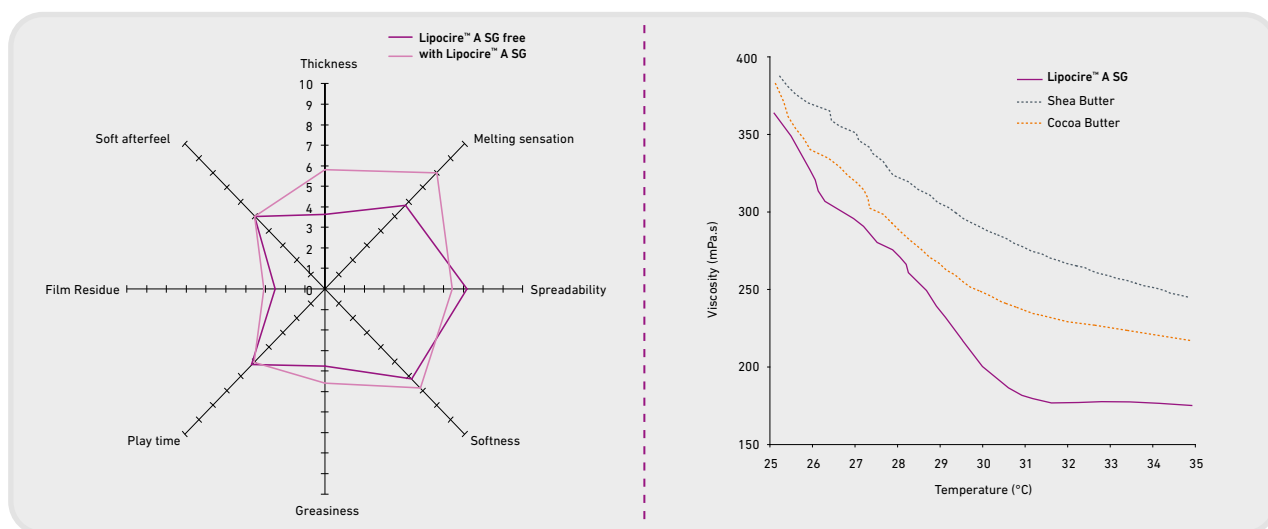

Fig. 1

Fig. 2

Easy to formulate and with no adverse effect on heat stability, Lipocire™ A SG can transform the most unexciting formulations into sensorial winners.

Applications

Skincare & suncare

Sensory added value

Add to oil phase at level between 2 and 10%.

Key benefits

- ✓ Increases melting sensation, comfort, creaminess
- ✓ Light afterfeel
- ✓ Perfect heat stability

Make-up

Performance & texture

Key benefits

use up to

- ✓ Mascara
Creaminess and volume: **5%**
- ✓ Lipstick and lip gloss
Transfer, melting sensation, coverage and comfort: **10%**
- ✓ Stick and eyeliner
Ease of application and transfer: **10%**
- ✓ Eyeshadow and blush
Homogeneity and skin feel: **5%**
- ✓ Loose Powder
Improved soft feel: **3%**

Other grades available

In 2016, all Lipocire™ references are 100% made from certified sustainable palm oil and palm kernel oil:

- **Lipocire™ CM SG** has a melting point slightly higher than Lipocire™ A SG and is of interest in more rigid formulations such as sticks and pressed powder.
- **Lipocire™ DM SG** has a melting point higher than the 2 other grades and is of interest in more solid formulations such as pencils.

	Melting Point (°C)	INCI	Ecocert ⁽²⁾	Cosmos ⁽³⁾
LIPOCIRE™ A SG Code 5838	36.4	C10-18 Triglycerides	•	•
LIPOCIRE™ CM SG Code 5839	37.5	C10-18 Triglycerides	•	•
LIPOCIRE™ DM SG Code 5906	44.3	C10-18 Triglycerides	•	•

⁽³⁾ The product has been validated by ECOCERT Greenlife according to the COSMOS standard of Organic and Natural cosmetics

Responsible sourcing

Palm oil today dominates the worldwide oil market; yet its impact on deforestation and its consequences on biodiversity have rightfully raised concerns.

In order to counter such damaging effects on the environment, a Roundtable on Sustainable Palm Oil (RSPO) was established in 2004. This group of palm producers, growers, environmental and social NGOs, refiners and users has agreed to a set of criteria that must be met for palm oil to be certified sustainable.

RSPO certification of palm oil is the promise that the plantations concerned offer a true guarantee of traceability, but also improved working conditions in local communities: fair pricing, access to medical care and education.

Particular attention is given to the respect of property rights and to farming methods that must prevent pollution and soil erosion.

As a user of palm oil and palm kernel oil derivatives, Gattefossé is sensitive to the environmental impact of palm tree growing and participates in the development of sustainable cultivation.

Sourcing procedures have been implemented to ensure that the palm and palm kernel oils used in Lipocire™ A SG are guaranteed sustainable.

Gattefossé, member of RSPO since 2010

In 2010, Gattefossé became a member of RSPO, to support conscientious and responsible palm oil producers and cooperatives.

In 2013, Gattefossé achieved the RSPO supply chain certification for the use of certified segregated palm and palm kernel oil.
