

Phylderm® Vegetal

Oxygen therapy

People make our name

Providing essential nutrients

Day after day, skin and hair face stress, pollution, UV, and other harsh elements. These constant assaults damage skin cells that lose their energy and efficiency. Skin becomes duller, less tonic. Hair is more fragile and loses vitality.

An effective way to restore radiance and energy is to bring more oxygen to cells and thereby boost their metabolism.

A rich composition

Soy is a leguminous plant species (family of *Fabaceae*), native to East Asia and widely grown for its edible beans. At the origin of the soy life cycle, soybeans contain all the components necessary to the development of the plant: peptides rich in essential amino acids, mineral elements...

Phylderm® Vegetal is extracted from GMO-free soybeans using a gentle enzymatic extraction process that guarantees the presence of an important amount of peptides in the final product. The ingredient thus offers our skin cells and hair the soybeans' potential of life and their stimulating capacity.

Peptides

They induce a revitalization of the cutaneous metabolism and insure long-term rejuvenation of the cell's vital functions.

Phylderm® Vegetal is obtained by a specific reproducible extraction process allowing the selection of a high fraction of peptides whose molecular weight is mainly below 1 000 Daltons.

These peptidic or heteropeptidic fractions are characterized by their ability to boost vital cellular functions, due to a growth-factor like activity.

Aminoacids

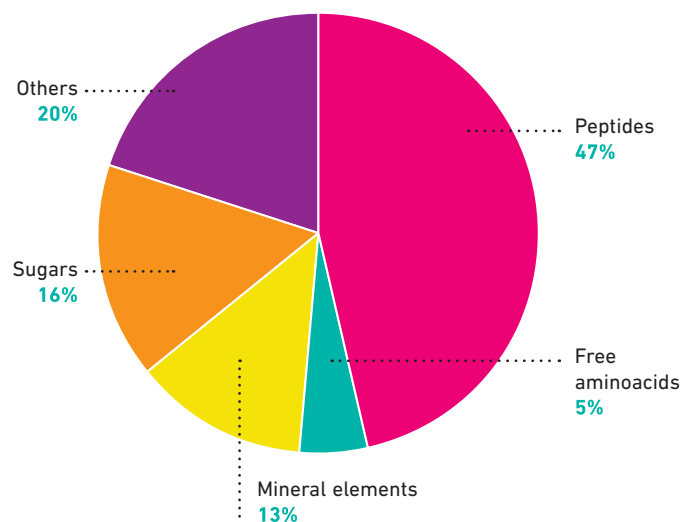

Phylderm® Vegetal contains many essential aminoacids, which are not naturally synthesized by the organism. Arginine and Isoleucine are abundantly present in the extract.

These directly provide the skin with nutrients responsible for maintaining optimal biological balance. In particular, these aminoacids are used in the synthesis of important macromolecules such as collagen, elastin and keratin.

Mineral salts

Mineral salts (Potassium, Sodium, Calcium...) are catalysts of cutaneous biological reactions and play an important role in maintaining epidermal surface moisture through their capacity to fix water.

**Phytochemical composition
of Phylderm® Vegetal**

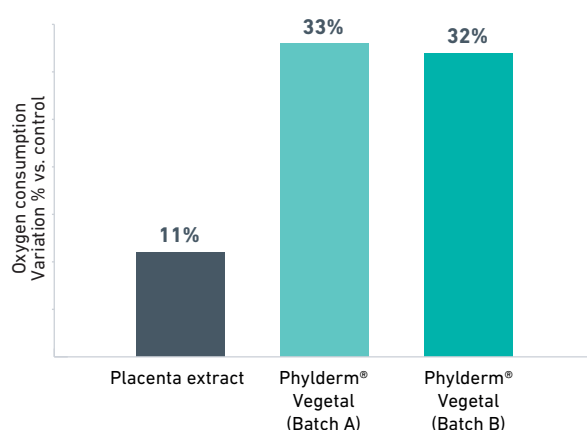

Boosted metabolism

The revitalizing and biostimulating activity of Phylderm® Vegetal was shown *in vitro* by various cellular tests.

Improved cellular respiration

Oxygraphic measurement has shown the activity of Phylderm® Vegetal on human fibroblasts metabolism. Oxygen consumption has been compared to a placenta extract used as the positive reference.

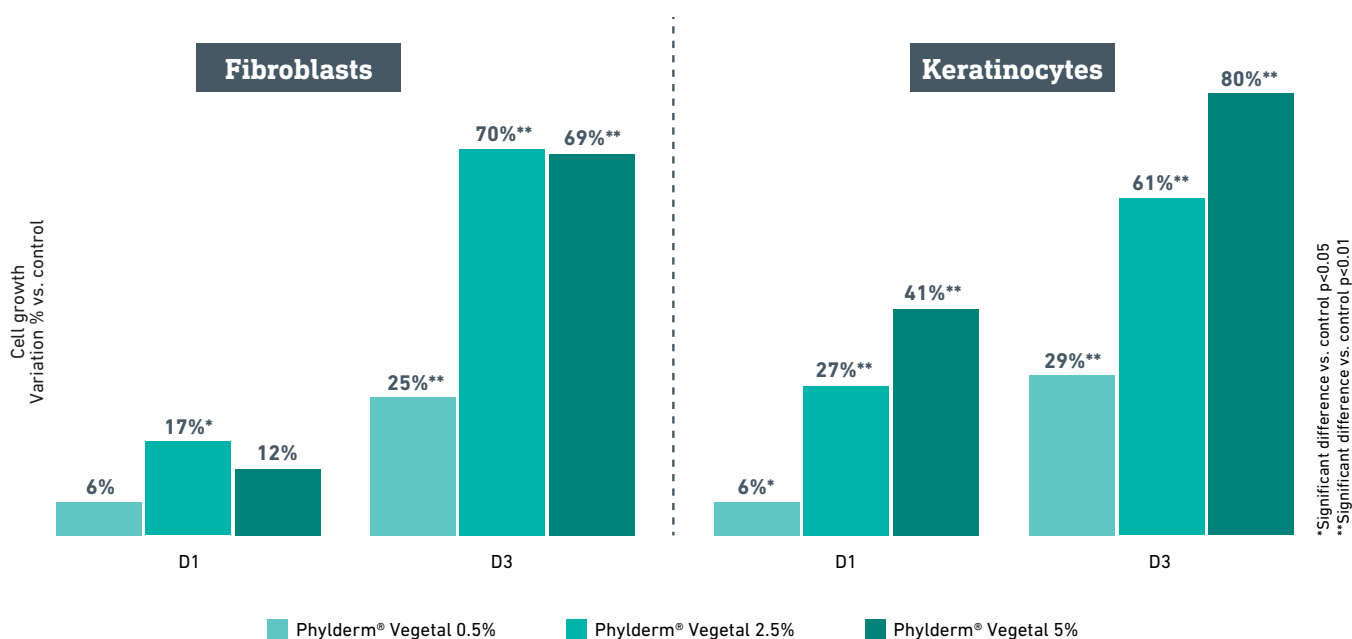

Phylderm® Vegetal increases oxygen consumption up to 33%. It relaunches cellular respiration with a good reproducibility.

Cell renewal

Another series of tests highlight the biostimulating action of Phylderm® Vegetal.

Cell growth has been measured on keratinocytes and fibroblasts.

Phylderm® Vegetal stimulates cell renewal in both keratinocytes and fibroblasts, with a dose response effect. It enables a complete revitalization of the skin.

Phylderm® Vegetal

stimulates cell renewal, amplifying skin radiance and making hair more resistant to environmental damage.

At the origin of the vegetable life cycle, seeds are source of intense activity. Naturally rich in nutritive elements, they contain all the components necessary to the development of the plant: peptides rich in essential amino acids, mineral elements...

Among seeds, soybeans are particularly interesting for their high concentration in proteins with guaranteed reproducibility.

Claims

- Boosts cell metabolism
- Provides essential nutrients
- Stimulates skin cell renewal
- Oxygenates

Applications

- Revitalizing treatments
- Body care—nourishing lines (all skin types)
- Hair care—fortifying treatments (toners, serums, conditioners, masks, etc.)

Use level

0.5-10%

INCI name: Hydrolyzed soy protein

Preservatives: Benzoic Acid 0.5%, Sorbic Acid 0.1%

Worldwide approval for cosmetic applications

Listed on IECIC (Inventory of Existing Cosmetic in China) 2015
