

Gattefossé strengthens its strategy of developing responsible ingredients with 3 products labeled ERI 360°

Press Release

Lyon, July 9th, 2021

As part of its continuous progress and ambitious CSR approach, Gattefossé has obtained the ERI 360° label for three of its major cosmetic ingredients.

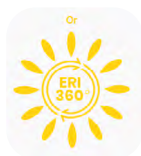

This label, co-created in 2018 by cosmetics industry players including Gattefossé and developed by Innov'Alliance, enables the entire life cycle of a product to be assessed, from its origin through to its launch to market.

ERI 360°: assessing the level of eco-responsibility of an ingredient

The ERI 360° label combines a set of tools and indicators to measure the sustainability and degree of eco-conception of the ingredient. The standard analyzes the entire value chain, from the cultivation and harvesting of the plant, through processing until the ingredient exits the factory.

Through this label, Gattefossé has acquired in-house the skills and tools to carry out a complete diagnostic of its ingredients, leading to improved conception of new products.

There are 3 levels of certification: bronze for a score between 75 and 85/100, silver for a score between 85 and 95/100 and gold for a score above 95/100. Since its creation, 30 ingredients have been labelled ERI 360°, of which only 2 have obtained the gold label, proving the very high standards required for this certification.

Within Gattefossé, priority is given to the issue of sustainability of raw materials. Gattefossé strives to ensure that its raw materials come from reliable, identifiable and renewable sources, thanks to rigorous tracing of their origins.

From this point, the company identifies the most environmentally friendly and energy-efficient extraction or production method that will allow to obtain the required activity or functionality for the ingredient.

Gattefossé's labelled ingredients

Gattefossé has audited three of its cosmetic ingredients with the ERI 360° label.

Gatuline® Link'n Lift, silver label. An anti-ageing active ingredient obtained by the innovative NaDES (*Natural Deep Eutectic Solvents*) technology and derived from the horse chestnut flower, this ingredient is rich in active molecules present exclusively in this flower. It targets vertical and horizontal wrinkles around the eyes.

Gatuline® Renew, silver label. A natural extract of carefully selected and handpicked Japanese cedar buds, this active ingredient is rich in energetic phytochemicals that stimulate skin renewal. The skin is visibly more hydrated, softer, and smoother.

EnergiNius®, bronze label. Obtained from the roots of the Indian Ginseng (*Withania somnifera*) plant, this ingredient is certified organic and obtained using NaDES technology. It protects skin cells from artificial visible light emitted by screens, an additional environmental stress induced by our modern lifestyle.

"We have been working for many months to obtain the ERI 360° label for these key actives. This label, based on an analysis grid of 100 indicators, is one of the strictest currently in use, and focuses on a full cradle-to-gate evaluation of ingredients, their composition and processing. The beauty industry has high expectations on sustainability and eco-responsibility, and we at Gattefossé share the commitment of our customers to provide ingredients that are constantly in progress in this area. We intend to pursue the ERI 360° certification for other products in the coming months" explains Paula Lennon, Group Director Personal Care.

Evaluated "Gold" by EcoVadis in 2020 after a significant improvement of 16 points since the first evaluation in 2017, Gattefossé is committed to pursue its CSR efforts throughout its value chain.

About Gattefossé

Gattefossé is a French company who develops, manufactures and sells specialty ingredients for the personal care and pharmaceutical industries. Specialist in lipid chemistry and plant extraction, the group offers recognized expertise in formulation using its 4 application laboratories.

Gattefossé markets its products in more than 60 countries through 12 affiliated companies and a network of agents and distributors which provide solid technical support to its customers: 75% of its turnover is achieved outside France.

The company remains a family-run, independent business since its creation in 1880 and now employs 320 people worldwide.
