

1. DEFINITION

DEFINITION
Behenoyl polyoxyl-8 glycerides NF

DENOMINATION	
INCI NAME (PCPC - International Nomenclature of Cosmetic Ingredients)	PEG-8 behenic glycerides
UNII (Unique Ingredient Identifier) USP/FDA Substance Registration System (SRS)	Not referenced

2. FIELD OF USE

FIELD OF USE
This ingredient must be used according to appropriate regulations
Pharmaceutical ingredient (oral, topical and/or rectal/vaginal routes)

3. MANUFACTURING PROCESS AND COMPOSITION

MANUFACTURING PROCESS
Esterification reaction between PEG-8, Glycerol and Behenic acid. The esterification step is followed by atomization using a spray-cooling technique. No solvent or catalyst used during the manufacturing process.

COMPOSITION	
Well defined multi-constituent substance composed of Mono, di- and triglycerides and PEG-8 mono- and di- esters of Behenic acid	
Full Labeling (Key letters system) $A_1 \geq 75.0$; $50.0 \leq A_2 < 75.0$; $25.0 \leq B < 50.0$; $10.0 \leq C < 25.0$; $5.0 \leq D < 10.0$; $1.0 \leq E < 5.0$; $0.1 \leq F < 1.0$; $G < 0.1$	
PEG-8 behenic glycerides	$A_1 \geq 75.0$ %
Other constituents (i.e. incidental ingredients)	
None

Last update: 28 March 2023

4. DRUG MASTER FILE

Country	Master file number
US DMF (Type IV – Excipient)	8605 - Inactive
Canada MF (Type III – Excipient)	/
Other countries	/
For submission of the DMF in another country, please contact your local Gattefossé representative	

5. PHARMACOPEIAS

CONFORMITY TO PHARMACOPEIAS	
Reference	Conforms to monograph
European Pharmacopeia Current edition	/
USP/ NF Current edition	Behenoyl Polyoxylglycerides
Japanese Pharmaceutical Excipient JPE Current edition	/

6. SPECIFIC PHARMACEUTICAL REGULATIONS

REGULATORY STATUS OF THE INGREDIENT FOR BORDER-LINE APPLICATIONS AUSTRALIA (TGA) - Australian Register of Therapeutic Goods Ingredients			
Status	Ingredient Name	Use	Restrictions
Approved	Behenoyl polyoxyglycerides	Available for use as an Excipient Ingredient in: Biologicals, Export Only, Prescription Medicines	/
AUSTRALIA: Therapeutic goods are divided into 'medicines' and 'medical devices'. Some 'medicines' are limited to prescription-only while others are available without a prescription. Non-prescription medicines may be 'complementary medicines' (i.e. vitamin, mineral, herbal, aromatherapy, and homoeopathic products) or 'OTC medicines' and may be 'listed' (i.e. Sunscreens SPF4 and >4) or 'registered' in the ARTG.

7. SAFETY ASSESSMENT

SAFETY STUDIES PERFORMED BY GATTEFOSSE

Study type/ duration	Route	Species	Test article	Results/Conclusions	Reference
Acute toxicity (OECD 401)	Oral	Rat	COMPRITOL® HD5 20% in water	LD50(oral) > 2000 mg/kg	(Gattefossé data, GAT-88492, 1988)

8. CHEMICAL REGULATIONS

CHEMICAL REGULATION

INCI NAME	CAS #	EC #	Chemical name
PEG-8 behenic glycerides	68552-95-4 (or 165658-60-6) (or 116810-39-0)	Not applicable Not applicable Not applicable	Fatty acids, vegetable-oil, ethoxylated (or Rape oil, ethoxylated) (or Fatty acid, rape oil, ethoxylated)

EC numbers: There are three separate inventories. These are the European Inventory of Existing Commercial Chemical Substances (EINECS), the European List of Notified Chemical Substances (ELINCS) and the No-Longer Polymers (NLP) list. EINECS numbers start with 2 or 3. ELINCS numbers start with 4. NLP numbers start with 5. Substances without EC numbers were assigned "list numbers" in order to facilitate REACH submissions. They are solely of administrative, and not of regulatory relevance. The list numbers start with 6, 7, 8 or 9.

NATIONAL INVENTORIES

INCI NAME	U.S.A. (TSCA)	Canada (DSL/NDSL)	Australia (AICS)	China (IECSC)	Other inventories
PEG-8 behenic glycerides	Listed	NDSL listed R-ICL listed	Listed	Listed	Fatty acids, vegetable-oil, ethoxylated: NDSL, REACH, TCSI, TDCA, TSCA, VNECI / Ethoxylated fatty acids, vegetable-oil: AREC, ECL (or) Rape oil, ethoxylated: IECSC, NZIoC, REACH, VNECI (or) Fatty acids, rape-oil, ethoxylated: AREC, ECL, PICCS, REACH, TCSI / Fatty acid, rape oil, ethoxylated: AIIC

U.S.A.: Substances that are regulated under other federal regulations, including food additives, drug, cosmetics ... are not subject to TSCA regulation.
Canada: Substances not listed on DSL or NDSL can be imported in Canada in quantities not exceeding 100 kg per 12-month period and per importer. In addition, substances not listed in DSL or NDSL, but listed in the "in-commerce list" can be freely used in Products Regulated Under the Food and Drugs Act (F&DA). In addition, substances considered as "Natural" according Health Canada's definition are exempted from New Substances regulation.
Australia: Substances Introduced at 1% or less in cosmetics are exempted from AICS listing. Otherwise, substances not listed on AICS can be imported in Australia in quantities not exceeding 10 kg per 12-month period and per importer. In addition, in the Industrial Chemicals (Notification and Assessment) Act 1989 (the Act), an industrial chemical which meets the definition of 'a naturally-occurring chemical' is taken to be on the Australian Inventory of Chemical Substances (AICS), whether listed or not, and therefore does not require notification as a new chemical prior to manufacture or importation into Australia.

REACH REGULATION

(REGISTRATION, EVALUATION, AUTHORISATION AND RESTRICTION OF CHEMICALS)

INCI NAME	Status of the product	Status per substance
PEG-8 behenic glycerides	Exempted	Substances intended to be used in medicinal products (human and/or veterinary use) are exempted from the main provisions on registration, evaluation and authorization, under REACH regulation.

9. HISTORY OF USE

9.1. Pharmaceutical applications

9.1.1. FDA IIG reference for Chemical equivalent

FDA INACTIVE INGREDIENT GUIDE (http://www.accessdata.fda.gov/scripts/cder/iig/index.cfm)		
Inactive ingredient	Route / Dosage form	Use level
No FDA IID reference exactly matches the definition Behenoyl Polyoxylglycerides		
Maximum potency: Level info listed in the FDA IIG database refers to a specific product on the market. These levels do not constitute a regulatory max use level. When there is no info, the "maximum potency" field will be blank.		

9.1.2. FDA IIG references to the most similar chemical (read-across approach)

In the **read-across approach**, endpoint information for one chemical (the source chemical) is used to predict the same endpoint for another chemical (the target chemical), which is considered to be "similar" in some way (usually on the basis of structural similarity or on the basis of the same mode or mechanisms of action). In principle, read-across approach can be used to assess physicochemical properties, toxicity, environmental fate and ecotoxicity.

For any of these endpoints, read-across approach may be performed in a qualitative or quantitative manner.'

The similarities may be based on the following:

- a common functional group (e.g. aldehyde, epoxide, ester, specific metal ion);
- common constituents or chemical classes, similar carbon range numbers;
- an incremental and constant change across the category (e.g. a chain-length category);
- the likelihood of common precursors and/or breakdown products, via physical or biological processes, which result in structurally similar chemicals.

These similarities justify data gap filling in a chemical category by applying read-across.

FDA INACTIVE INGREDIENT GUIDE (http://www.accessdata.fda.gov/scripts/cder/iig/index.cfm)				
Inactive ingredient	Route	Dosage form	Maximum Potency per unit dose	Maximum Daily Exposure (MDE)
LAUROYL PEG-32 GLYCERIDES (UNII: H5ZC52369M)	ORAL	Capsule		7200mg
	ORAL	Tablet	0.15mg	
LAUROYL POLYOXYLGLYCERIDES (UNII: NA)	ORAL	Capsule	218 mg	
	ORAL	Tablet, film coated	0.15 mg	
	ORAL	Tablet	0.15 mg	
STEAROYL POLYOXYLGLYCERIDES (UNII: NA)	ORAL	Capsule	260 mg	
	ORAL	Tablet	23.34 mg	
STEAROYL POLYOXYL-32	ORAL	Capsule		960 mg

Regulatory data sheet (RDS) – Pharmaceutical market

COMPRITOL HD5 ATO (Code: 3124)

Last update: 28 March 2023

FDA INACTIVE INGREDIENT GUIDE (http://www.accessdata.fda.gov/scripts/cder/iig/index.cfm)				
Inactive ingredient	Route	Dosage form	Maximum Potency per unit dose	Maximum Daily Exposure (MDE)
GLYCERIDES (UNII: G6EP177239)	ORAL	Capsule, Extended Release		8 mg
	ORAL	Tablet		3 mg
HYDROGENATED PALM/PALM KERNEL OIL PEG-6 ESTERS* (UNII: 8EPU9MJ01K)	TOPICAL	Emulsion, Cream	5 %	
Maximum potency and maximum daily exposure: Level info listed in the FDA IIG database refers to a specific product on the market. These levels do not constitute a regulatory max use level. When there is no info, the maximum potency per unit dose and Maximum Daily Exposure (MDE) fields will be blank.				

*removed from IIG in July 2019 due to new data standard. The reference was not removed from IIG due to safety concerns.

9.1.3. FDA IIG references for larger family of chemicals

The following reference covers multiconstituent substances containing Behenoyl Polyoxylglycerides.

FDA Inactive ingredient guide (http://www.accessdata.fda.gov/scripts/cder/iig/index.cfm)				
Inactive ingredient	Route	Dosage form	Maximum Potency per unit dose	Maximum Daily Exposure (MDE)
PEG VEGETABLE OIL* (UNII: Not available)	IM – SC	Injection	7 %	NA
	IV(INFUSION)	Injection	5 %	NA
Maximum potency and maximum daily exposure: Level info listed in the FDA IIG database refers to a specific product on the market. These levels do not constitute a regulatory max use level. When there is no info, the maximum potency per unit dose and Maximum Daily Exposure (MDE) fields will be blank.				

*removed from IIG in July 2019 due to new data standard. The reference was not removed from IIG due to safety concerns.

9.1.4. Other references

HANDBOOK OF PHARMACEUTICAL EXCIPIENT (Current edition by Paul J. Sheskey, Bruno C Hancock, Gary P Moss Dabid J Goldfard)			
Denomination	Functional Category	Regulatory status	Safety
Polyoxylglycerides	Dissolution enhancer; emulsifying agent; nonionic surfactant; penetration agent; solubilizing agent; sustained release agent.	Lauroyl polyoxylglycerides and stearoyl polyoxylglycerides are approved as food additives in the USA. Included in the FDA Inactive Ingredients Database (oral route: capsules, tablets, solutions; topical route: emulsions, creams, lotions; vaginal route: emulsions, creams). Oleyl polyoxylglycerides are included in a topical cream formulation licensed in the UK.	Polyoxylglycerides are used in oral and topical pharmaceutical formulations, and also in cosmetics and food.
