U.S.A.: Substances that are regulated under other federal regulations, including food additives, drug, cosmetics... are not subject to TSCA regulation. "Naturally occurring substances" are not subject to Premanufacture Notice reporting.

Canada: Substances not listed on DSL or NDSL can be imported in Canada in quantities not exceeding 100 kg per 12-month period and per importer. Substances listed on NDSL only can be imported in Canada in quantities not exceeding 1000 kg per 12-month period and per importer. Please contact us if you go beyond these volumes. In addition, substances not listed in DSL or NDSL, but listed in the "in-commerce list" can be freely used in Products Regulated Under the Food and Drugs Act (F&DA). In addition, substances considered as "Natural" according Health Canada's definition are exempted from New Substances regulation.

Australia: The Australian Inventory of Chemical Substances (AICS) has been replaced by the Australian Inventory of Industrial Chemicals (AIIC) since July 2020. Chemicals listed on the AIIC are available for industrial use in Australia; however, importers must register with Australian authorities before importing the chemical in Australia. Some chemicals require specific information to be provided to Australian authorities. Naturally occurring chemicals are exempted from AIIC listing; importers may have to submit a declaration. Chemicals not listed on the AIIC must be assessed before importation.

HANDBOOK OF PHARMACEUTICAL EXCIPIENT (Current edition by R. C. Rowe, P.J. Sheskey, W. G. Cook, M. E Fenton)			
Denomination	Functional Category	Regulatory status	Safety
Ethylene Glycol Palmitostearate	Emollient, emulsifying agent, Stabilizing agent	Included in non-parenteral medicines licensed in Europe.	Ethylene glycol palmitostearate is mainly used in cosmetics and topical pharmaceutical formulations, where it is generally regarded as a relatively nontoxic and nonirritant material.
Polyoxyethylene stearates	Emulsifying agent; solubilizing agent; wetting agent.	Included in the FDA Inactive Ingredients Database (dental solutions; IV injections; ophthalmic preparations; oral capsules and tablets; otic suspensions; topical creams, emulsions, lotions, ointments, and solutions; and vaginal preparations). Included in nonparenteral medicines licensed in the UK. Included in the Canadian List of Acceptable Non-medicinal Ingredients.	Although polyoxyethylene stearates are primarily used as emulsifying agents in topical pharmaceutical formulations, certain materials, particularly polyoxyl 40 stearate, have also been used in intravenous injections and oral preparations. Polyoxyethylene stearates have been tested extensively for toxicity in animals and are widely used in pharmaceutical formulations and cosmetics. They are generally regarded as essentially nontoxic and non-irritant materials. Polyoxyl 8 stearate LD50 (hamster, oral): 27 g/kg LD50 (rat, oral): 64 g/kg Polyoxyl 20 stearate LD50 (mouse, IP): 0.2 g/kg LD50 (mouse, IV): 0.87 g/kg
